

ABSTRACT OF THE DISCLOSURE

Disclosed is a lottery buying and selling system introducing economic variable indexes. The system includes the steps of a consumer transmitting data in which at least one real-time economic variable index is inputted to a vendor's system, the vendor's system receiving the data from the consumer and creating a consumer record, the vendor's system judging a prize winning by comparing a confirmed economic variable index with the data of the consumer record after the lapse of a predetermined time period and performing an allotment according to a result of comparison, and the vendor's system transmitting a result of the allotment to a credit company system. Thus, the consumer group having professionalism can be widely secured, and the defects of the entertainingness and speculation can be minimized.
